RoofGuard X-Press

Engineered for Safety and Efficiency | Fall Protection Made Simple

Meets or exceeds all North American codes and standards

RoofGuard X-Press is designed as a safe, easy, engineered solution to providing worker safety when working near the leading edge of a roof top. RoofGuard is a simple, safe, passive solution for workers being put at risk of working at heights or as a barrier from other hazards.

The RoofGuard X-Press system can be quickly and easily installed on most roof tops. Its modular freestanding design allows for quick installation with no welding, drilling or bolting to the structure. Simple, easy to follow instructions and one tool are included to assemble the system. Systems are portable and constructed with counterweighted baseplates so that roof penetration is not required. The bases are designed to be stackable with a built-in carry handle and only weight 40lbs making them ergonomically friendly while still meeting all North American codes and regulation.

RoofGuard X-Press is rented out in crates containing 96 linear ft of guardrail, and rent is based on a monthly term. Each crate contains 36 x 40lb baseplates, 12 leading edge yellow 8ft rails, 5 return grey 6ft rails, set screws, engineered drawings for a 96ft system and an installation manual with allen key.

For more information on our RoofGuard X-Press rental program, please contact your local Battlefield location.
