BATTLEFIELD EQUIPMENT RENTALS PROUDLY DISTRIBUTES STRUCTURE SHIMS INC.

HIGH QUALITY CONSTRUCTION SHIMS

Approved for use by The Road Authority & OPS Specifications and the Ministry of Transportation

Structure Shims Inc. is family-owned and operated in Ontario, Canada that manufactures high quality construction shims, proudly distributed by Battlefield Equipment Rentals across Eastern Canada.

Top quality SSI construction shims are square pieces of high-density polyethylene (plastic), primarily used as spacers in construction for adjusting manhole and catchbasin grates. The shims are a non-shrinkable tool that are strong, durable, efficient worker-friendly, and ecological. Lightweight and easy to transport, these shims don't erode, rust or damage the enviroment and last significantly longer than traditional industry materials such as bricks, stones, steel, or wood spacers.

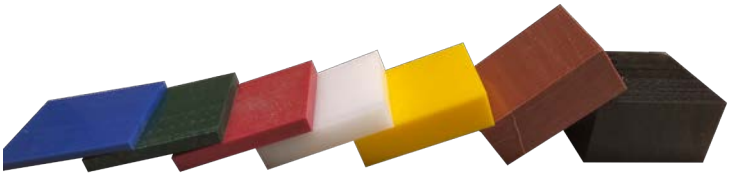

The shims can serve as washers or spacers in various construction industries such as paving, curb and gutter, sewer construction, and road-building.

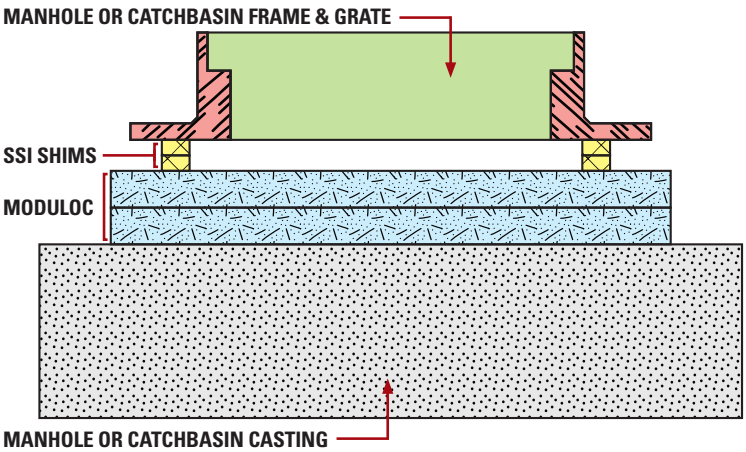

Save time and money using their colour-coded system, sorted according to thickness. Find the exact fitted shim you need with only a glance, saving you valuable time and money!

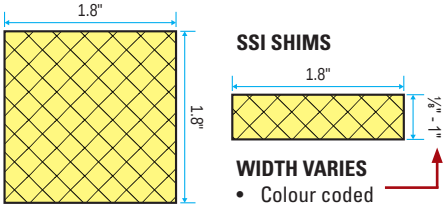

Specifications: 1.8" (47mm) squares
Thickness: Varies 1/8" (3mm) - 1" (25.2mm) (colour coded)

Shims are packaged in bags of 50 or 100, according to their specific thickness. They can also be ordered in an assorted bagged lot in variou colours.

Contact your local Battlefield Equipment Rentals to order quality Canadian-made construction shims at an affordable price!

INSTALLATION
- Between either concrete casting or concrete moduloc and the cast iron casting.
- Fixed in place with concrete mortar.
