

# MPC100

## CONTROL

The Cat® MPC100 propulsion control system is available for all electronically controlled Cat marine propulsion engines and compatible with all major marine transmissions. It provides built-in control of the engine and transmission from up to 8 command stations, with a mode selector and engine start interlocks. Installation is plug & play for 12 and 24VDC powered applications and multiple powertrain configurations — all supported by a CAT electronic technician.

### Key Features:

- Supports 12 and 24VDC powered applications
- Available for all electronically controlled Cat marine propulsion engines
- Compatible with all major marine transmissions
- Control from up to 8 command stations
- Built-in control of the engine, transmission incl. trolling valve
- Mode selector incl. Warm-up, Trolling, Advanced Trolling, Slow Vessel and Cruising modes
- Synchronization mode for twin propeller operation using Single Lever
- Engine start interlocks
- Highly configurable for multiple powertrain configurations
- Easy plug & play installation supported by Cat Electronic Technician
- Optional backup control panel
